

PRODUCT VISION

Spotter

Your fitness journey. Your community. Your coach.

A connected health and fitness platform where people track their progress, share the journey, and receive support from an AI coach, a real coach, or both.

YOUR JOURNEY

Body profile, goals, plans, meals, workouts, daily tracking, and progress.

COMMUNITY

Share meaningful moments, discover others, follow journeys, and stay connected.

COACHING

Use an AI coach, work with a human coach, or combine both kinds of support.

One place to understand the journey, live it with others, and get meaningful guidance.

Fitness is more than a number

The experience of becoming healthier is personal, daily, social, and often difficult to navigate alone.

Disconnected information

Goals, meals, workouts, measurements, and advice often live in separate places.

Generic guidance

Advice without the user's profile and history cannot fully reflect their situation.

A lonely process

Consistency is harder without encouragement, accountability, and people who understand the journey.

THE SPOTTER IDEA

Spotter brings the full experience into one connected platform. A user's personal data creates a clear fitness journey. That journey can be supported by coaches and shared with a community under the user's control.

THE CORE LOOP

Understand -> Plan -> Track -> Reflect -> Coach -> Progress

Your journey

Spotter turns health and fitness activity into a personal story that can be understood day by day and over time.

1

Know the starting point

- Body profile and measurements
- Health information and preferences
- Calculated calorie and macro targets

2

Choose the destination

- Active fitness goals
- Target weight and measurements
- Personalized nutrition and workout plan

3

Live the plan

- Manual or image-assisted meal logging
- Workouts, exercises, sets, and duration
- Daily calories, macros, and activity summary

4

See change over time

- Progress check-ins and notes
- Weight and measurement history
- Graphs and body visualization

The journey remains useful on its own, even before a user joins the community or chooses a coach.

Coaching - AI, human, or both

Different users need different kinds of support. Spotter makes coaching part of the same journey instead of a separate experience.

AI COACH

A conversational coach that can use selected information from the user's journey to provide relevant explanations and suggestions.

- Answers questions about the current day
- Considers goals, meals, workouts, and progress
- Continues previous conversations
- Explains recommendations in context

HUMAN COACH

A real coach can build a profile, accept trainees, review permitted information, create plans, and give direct feedback.

- Coach discovery and relationship requests
- Plans and recommendations for trainees
- Review of shared progress and logs
- Private coach-to-trainee messaging

ONE USER, FLEXIBLE SUPPORT

A user can rely on the AI coach, work with a real coach, or combine both. Human-coach access to private fitness information is controlled by the user.

A community built around progress

Spotter's social layer gives people a place to share meaningful parts of the journey and support one another.

Share

Create text or image posts and share meals, workouts, progress, or completed goals.

Discover

Follow people, search for users and coaches, and explore public community posts.

Engage

Like, comment, save, and share posts while keeping ownership controls clear.

Connect

Use direct messages for user-to-user and coach-to-trainee conversations.

Stay informed

Receive relevant social, coaching, messaging, workout, meal, and goal notifications.

Stay safe

Use visibility settings, blocking, reporting, and controlled access to private information.

The community supports the journey; it does not replace it. Users choose what they share and what remains private.

How the three pillars reinforce each other

Spotter becomes valuable because the journey, community, and coaching are connected around the same user rather than built as unrelated products.

A logged workout can update the daily summary, contribute to progress, become context for the AI coach, be reviewed by an authorized human coach, and optionally be shared with the community.

Personalization requires responsibility

Spotter handles personal health and social information, so user control and clear boundaries are part of the product idea itself.

Privacy by choice

Users control account visibility and which fitness information can be seen by other people or a human coach.

Ownership and safety

People can edit or remove their own content, block unwanted interaction, and report harmful posts or comments.

Responsible AI

AI nutrition and coaching output is treated as guidance or estimation, not unquestioned truth or medical diagnosis.

Clear identities

Users, coaches, and administrators have different permissions, and every action is checked against ownership and role.

The goal is not to expose more data. The goal is to make the right information useful to the right person, with the user's permission.

One product, delivered in deliberate phases

The complete vision is broad, but it can be built safely by proving one connected layer at a time.

PHASE 1

Core journey

Accounts, profiles, goals, meals, workouts, daily tracking, progress, and the grounded AI coach.

PHASE 2

Community

Posts, feed, following, likes, comments, saving, sharing, reporting, and social discovery.

PHASE 3

Human coaching

Coach discovery, trainee relationships, sharing permissions, plans, feedback, and messaging.

PHASE 4

Richer intelligence

Vision meal analysis, reminders, body visualization, deeper progress insight, and trusted knowledge retrieval.

THE COMPLETE PRODUCT IDEA

Spotter is not only a tracker, not only an AI chatbot, and not only a social network. It connects a person's real fitness journey with community and coaching so healthier progress feels understandable, supported, and continuous.
